

Our Character: Kamele Kame

Our character's name is Kamele Kame. She is a student teacher at an American university. By day she is an average student but anytime there is trouble, she becomes a water protector. Whenever there is a report of pollution in the ocean, she goes there to purify the ocean. That's her special power. She can purify any liquid with her touch. Also when she is not in her water protector form, she can grow new land by stepping on any land that is dead. She isn't exactly human; she is part of a family of forest nymphs, meaning she has the ability to protect and purify land and oceans. She has a sidekick named Konan. He is like your average plushy, but when Kamele needs help, he turns into a lion-like form. He helps locate any sources of pollution.

Kamele says, "We need to save our oceans because the oceans are our major water source, and the plankton that live there provide most of the oxygen we breathe. So if the ocean goes, we will all suffer. Plus the animals that eat the plankton would die".

So remember, if you ever see a body of water that has been purified, Kamele and Konan were there!
